

New user interface for consolidated financial statements.

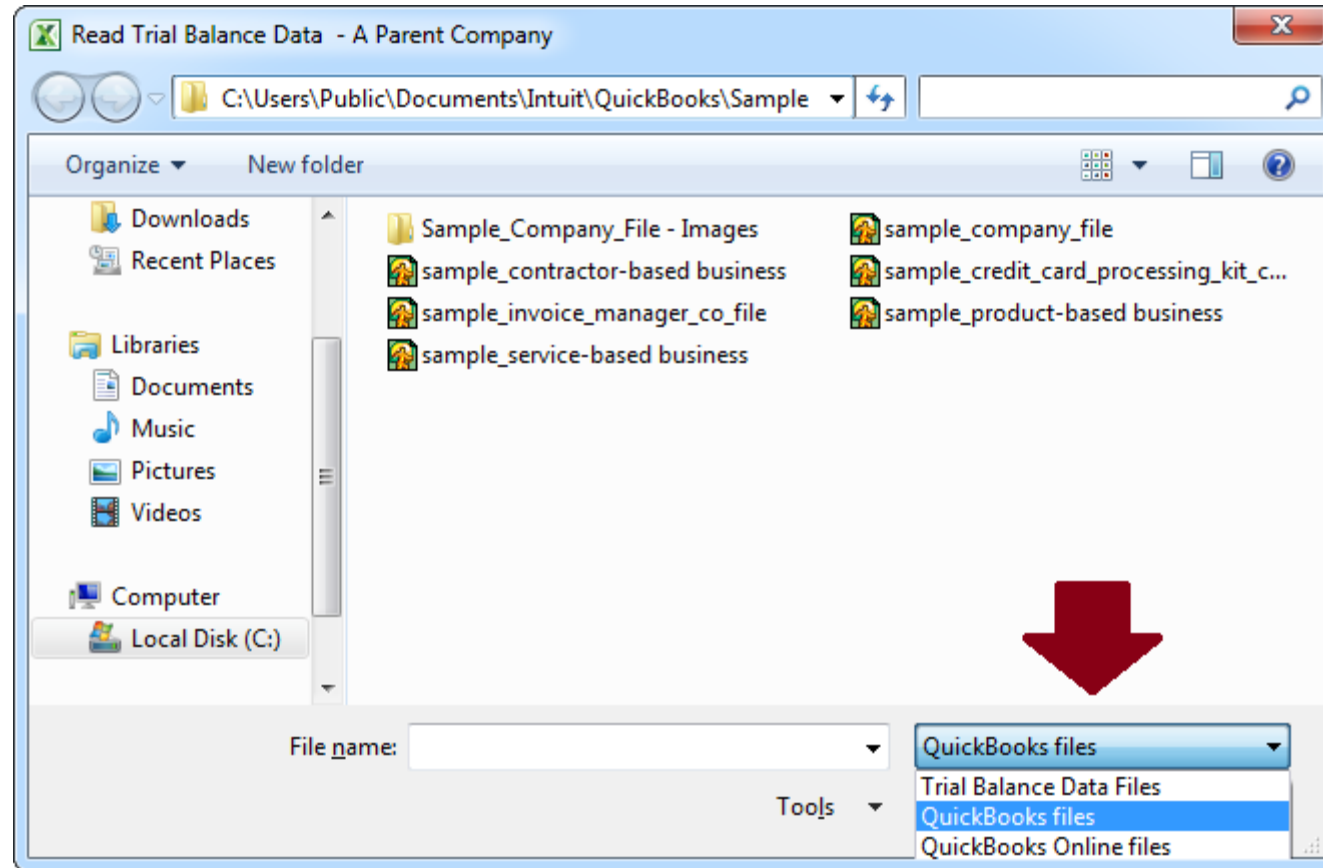

The current version of ExcelFSM offers a new user interface for consolidated financial statements.

The image shows a dialog box titled "Read TB Data Options" with standard Windows window controls (minimize, maximize, close). It contains three sections of radio button options:

- Consolidated FS option:** Two options are listed: "Single enterprise" and "For consolidated". The "For consolidated" option is selected, indicated by a blue dot and a red circle around the radio button.
- Input source file:** Three options are listed: "Excel file", "QuickBooks Desktop", and "QuickBooks Online". None are selected.
- General Ledger Drill Down option:** Two options are listed: "With GL transactions" and "Without GL transactions". The "Without GL transactions" option is selected, indicated by a blue dot.

At the bottom of the dialog are two buttons: "OK" and "Cancel".

The Consolidation list can combine files of various types (Excel files, QuickBooks Desktop Company files, QuickBooks Online Company files).

For more details, refer to the 'Consolidated' section in the 'Read Trial Balance Data' topic in the Help.
